

World Blood Cancer Day (Leukemia)

Leukemia symptoms can vary from one patient to another, but generally, most patients will experience one or more of the following symptoms:

Headaches

Night
sweats

Fever

Weight
loss

Frequent
infections

Facts:

- Every 180 seconds, one person is diagnosed with leukemia.
- Scientists do not yet know the true causes of leukemia.
- This disease may develop and develop as a result of a combination of several different genetic and environmental factors, but cancer itself is not inherited.
